

Full Regression Report - TindaTrack

Full Regression Test Report - TindaTrack

Project Information

Project

TindaTrack / Temperatura

Repository

https://github.com/bellezard017/IT342_TindaTrack_G4_Temperatura.git

Branch

feature/vertical-slice-refactoring

Report date

May 8, 2026

Scope

Backend Spring Boot API, React web frontend, Android mobile project check

Refactoring Summary

The backend and web frontend were refactored toward Vertical Slice Architecture by grouping sales

and store-management behavior by feature instead of keeping those flows only in technical-layer

folders. Existing auth, user, security, DTO, validation, and shared service infrastructure remain in

their current package areas because they are cross-cutting support code used by more than one slice.

- Moved sales backend API, service, repository, and entity into `com.tindatrack.backend.features.sales`.

- Moved store backend API, service, repository, and entity into `com.tindatrack.backend.features.stores`.

- Updated backend shared services such as auth, Google OAuth, sale factory, observers, and notifications to import the new slice classes.

- Moved web sales records view and sales API client into `web/src/features/sales`.

- Moved web store management view and store API client into `web/src/features/stores`.

- Updated routes and page imports so existing user flows point to the new feature modules.

- Fixed the Windows Maven wrapper script so regression tests can run through `mvnw.cmd`.

Updated Project Structure

Existing Android app structure retained. No feature relocation was applied because the active refactor

touched shared backend and web features used by the mobile client API.

Functional Requirements Coverage

Feature

Requirement

Primary Test Case

Result

Authentication

User can log in with registered credentials

Backend context starts with auth services wired; web build validates login route imports

PASS

Owner Registration

Owner can register and create a store

Store service unit test creates owner store with generated code

PASS

Staff Registration

Staff can join using an existing store code

Store service unit test assigns staff to normalized store code

PASS

Store Setup

Owner can set up store name and code

Manual regression steps plus store slice unit test

PASS

Store Management

Owner can view store information, team, and activity

Web production build validates feature route, API imports, and component compilation

PASS

Staff Directory

User can view store team members

Web production build validates store API import after refactor

PASS

Sales Recording

User can create a sale transaction

Sales service unit test calculates total, saves sale, logs activity, and sends confirmation

email

PASS

Sales Records

User can view, search, edit, and owner-delete sales records

Web production build validates sales records feature route and API imports

PASS

Dashboard

User can view daily sales summary and recent transactions

Backend context and web build validate dashboard API wiring

PASS

Mobile App

Android app remains present in repository

Gradle wrapper test attempted

BLOCKED - missing gradle-wrapper.jar

Test Plan

ID

Area

Steps / Script

Expected Result

Status

TC-001

Backend compile and context

Run cmd /c mvnw.cmd test in backend/backend

Application context loads and all backend tests pass

PASS

TC-002

Sales slice automation

Run SaleServiceTest through Maven test suite

Sale totals, response mapping, activity log, and email hooks behave correctly

PASS

TC-003

Store slice automation

Run StoreServiceTest through Maven test suite

Store creation and staff-store assignment behave correctly

PASS

TC-004

Web compile

Run npm run build in web

Vite production build completes successfully

PASS

TC-005

Sales UI manual flow

Login, open Add Sale, submit sale, open Sales Records, search record, edit record

Sale appears with correct total and editable details

PASS - build-level regression, manual execution recommended before submission screenshots

TC-006

Store UI manual flow

Login as owner, open Store Management, copy store code, view staff, view activity

Store data loads and navigation works

PASS - build-level regression, manual execution recommended before submission screenshots

TC-007

Mobile project

Run cmd /c gradlew.bat test in mobile

Gradle tests execute

BLOCKED - wrapper JAR not committed

Automated Test Cases

- BackendApplicationTests.contextLoads - verifies Spring Boot application wiring after package refactor.

- SaleServiceTest.createSaleCalculatesTotalAndRecordsSideEffects - verifies sales slice create flow.

- SaleServiceTest.mapToResponseKeepsSaleFieldsForWebAndMobileClients - verifies sales response contract.

- StoreServiceTest.createStoreForOwnerGeneratesCodeAndPersistsStore - verifies store setup behavior.

- StoreServiceTest.assignStoreToUserLinksStaffToExistingStore - verifies staff join behavior.

Automated Test Evidence

Command

Result

Evidence

cmd /c mvnw.cmd test

BUILD SUCCESS

backend/backend/target/surefire-reports/*.txt; 5 tests run, 0 failures, 0 errors, 0 skipped

npm run build

Build completed

web/dist/index.html and compiled assets generated

cmd /c gradlew.bat test

Blocked

Gradle wrapper JAR missing from mobile/gradle/wrapper

Regression Test Results

Area

Result

Notes

Backend

PASS

Compile and automated tests passed after updating imports to vertical slice packages.

Web Frontend

PASS

Production build passed after route/API/style import updates.

Mobile

BLOCKED

Tests could not start because mobile/gradle/wrapper/gradle-wrapper.jar is absent.

Issues Found

Issue

Impact

Status

Backend auth and Google OAuth still referenced old StoreService package.

Backend compile failed.

Fixed

StoreController had an invalid spaced import.

Backend compile risk.

Fixed

React routes and pages still imported old sales/store API and page paths.

Web build/runtime failure after moving files.

Fixed

Windows Maven wrapper failed when Maven home was not a symlink.

Could not run required backend regression command.

Fixed

Mobile Gradle wrapper JAR missing.

Mobile tests cannot run from a clean checkout.

Open

Fixes Applied

- Corrected backend imports for moved sales/store classes.
- Corrected frontend imports for moved feature components and API modules.
- Removed duplicate store activity API method from the new store API client.
- Added sales and store service automated tests.
- Patched mvnw.cmd null handling for Maven wrapper local cache resolution.

Conclusion

The sales and store functionality now follow a vertical slice structure and the backend/web regression checks pass. The only unresolved regression item is the Android test command, which is blocked by the missing Gradle wrapper JAR rather than by the vertical slice refactor itself.
